⌂ romvales

I'm a freelance, tech-savvy professional who can build basic web apps, mantain and update a linux server, and manage social media pages. I mostly worked at startups so I can do a lot of things for a company. I'm ready to invest my time on new roles and contribute to a company.

Education

Southern Luzon Technological College Foundation Inc.   *June 2017 — April 2019*

Associate in Computer Technology - Software Development

- CS 101 - Fundamentals on Computing
- CS 107 - Data Structures and Algorithm
- CS 111 - Web Programming

Experience

IT & Marketing Specialist   *January 2023 — Present*

TalentBridge Visa Consultancy

TalentBridge Visa Consultany is yet another startup that I am currently working with, most of my duties reflect on what I did in the previous company that I work with, but in addition to the duties I am tasked to engage with our professional leads and assess their qualifications for the program that the company is offering.

- Ongoing in implementing their web apps for their back office
- Node / Astro
- Solid.js / Tailwind
- Figma, Canva, and Google Workspace
- Gentoo linux / Self-hosting Directus CMS & Pocketbase
- Notepad

IT & Marketing Specialist   *November 2021 — November 2022*

IDream Language Training Center

Built and maintain a basic clock in & out web apps used internally by the company. I also maintained their social media page by interacting with leads, and posting updates in the page. Additionally, I setup and maintain their linux server to which the web application was hosted.

- Used Figma, Canva and kdenlive for basic content creation
- Node / Express
- Preact / Vike SSR
- SQLite / Directus CMS
- Self-hosting and dedicated server management
- Notepad

Software Programmer   *November 2020 — May 2022*

Mayon I.T. Solutions Inc.

Mayon IT Solutions Inc. was a software startup company (they renamed it to Upward IT Solutions Inc.) developing enterprise application for various government agencies in our province. I contributed in building out the front end and server of one of their enterprise apps. It was a very complex application, and we did a lot of testing before it was fully deployed. The stacks that we used back in the day was Laravel, Vue, and MySQL for the database.

- Used Paypal Integration API to collect for payments
- Vue / JavaScript
- Laravel / PHP
- NGINX Proxy
- Docker / Azure App Service

Certificates

Digital Marketing Certified   *January 2025*
HubSpot Academy
